

Intelligent protection: Küper's curbstone deflector

OPTIMUM PROTECTION FOR ALL KÜPER COMBINATION BLADES.

Less wear – higher durability

In the curbstone deflector, Küper have developed optimum protection for the Küper Kombi S and Tuca SX Wave blades against abrasion at curbstones and guard rails. The rounded cylindrical shape ensures significant protection of blade and curbstone and may be replaced if required. The cast material is extremely robust at 600 HB, considerably extending the snow clearing blade's durability.

In comparison, a conventional clearing blade used without curbstone deflector shows distinct traces of wear in the directions of impact. This way, the blade is optimally protected – an ideal solution for even the most demanding applications.

Functions

- > Top-quality G-X 300 cast iron curbstone deflector
- > 600 HB durability
- > Easy to replace
- > Exclusively for Küper clearing blades
- > Protects blade and curbstone
- > No jamming with curbstone thanks to ergonomic shape

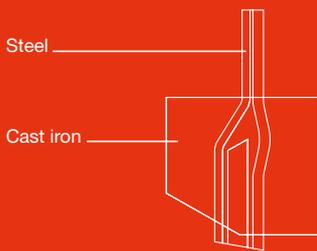

Küper curbstone deflector

A snow clearing blade accessory specifically developed for demanding requirements on the road. Durable, flexible and efficient.

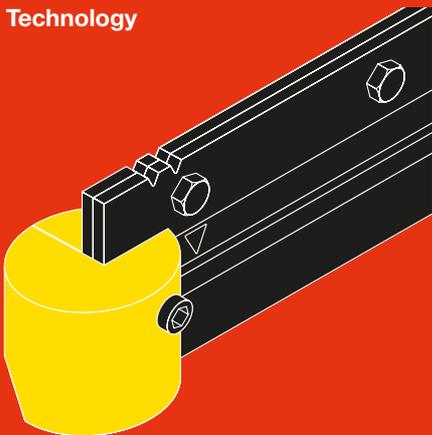

Materials

Cast iron

G-X 300 cast iron is an iron carbon alloy with an extremely high carbon content which is considerably harder than steel. The castings for the curbstone deflector are manufactured specifically for our clearing blade types.

Technology

The curbstone deflector is simply screwed to the clearing blade and provides optimum protection for the edges. The blades wear down evenly, considerably extending their durability. The curbstone deflector may be replaced at any time.

Areas of use

Motorway

Country road

City
